

# Earth Machine 80-Gallon Home Compost Bin

## Open To All Member Towns

**Offered at a subsidized cost of \$25 per Bin, while supplies last!**

Composting is a great way to recycle our organic waste into a beneficial soil amendment for our yards and gardens. Composting at home can also help reduce methane production at landfills. Using the compost in our landscapes helps store carbon in the soil instead of releasing it to the atmosphere. Start home composting by placing leaves, grass clippings, garden debris, fruit peels, vegetable scraps, tea bags, coffee grounds, eggshells, paper towels, napkins and even paper bags into the Earth Machine Bin.

It is easy to make compost, and the Member Towns make it even easier by offering these rodent-resistant home composting bins for \$25 - over 50% off the retail price. The price difference is offset by the MassDEP Sustainable Materials Recovery Program (SMRP). Each Member Town annually contributes \$500 and Northern Berkshire Solid Waste \$1,500 of their grant awards to offset costs of Earth Machines and offer additional recycling programming.
